

Go wide and smooth

Dynapac offers a range of screeds in widths up to 16 meters. Stability is the hallmark of our screeds and the unique engineering concept offers the benefit of efficiency in combination with an outstanding surface finish. A wide range of screed types and widths makes it easy to find the perfect choice for any type of job.

Vario Screeds

Up to 9.70 meters of paving width can be handled efficiently by Dynapac's telescopic screeds. A high degree of stability is maintained by an advanced control system for the hydraulics of the extendable sub-assemblies.

High compaction screeds

The High Compaction Screeds are designed to meet the demands for operation in either high compaction or standard mode of operation.

Final compaction is performed by an additional vibratory compaction unit. This ensures an optimum degree of final compaction at every paving condition.

Fixed screeds

For the really wide paving jobs the fixed screed is a natural choice. Using a high-capacity tractor unit, the fixed screed can be used to achieve working widths of up to 16 meters. Stability and rigidity is, of course, crucial here and Dynapac is the safe and efficient choice.
